

**Amendments to the Specification:**

Please replace the paragraph at page 25, lines 10-15, with the following amended paragraph:

Thus, in a particularly preferred embodiment of the invention the target cell is a cell of the immune system. It may be a cell of the unspecific immune system, known to provide innate immunity, or a cell of the specific immune system, known to provide acquired immunity. In the latter case, it may be B cells or T cells, particularly T<sub>H</sub>2 cells. Also, degenerate cells of the immune system can be target cells. Also cells, particularly degenerate cells of the nervous systems, for example nerve cells, may be target cells for the selection of suitable targeting modules.
